How to Create a Stock Management Database in Microsoft Access - Full Tutorial with Free Download

This tutorial will explain how to use Microsoft Access to create a working stock control database with some basic features.

Follow along with our free download of the basic stock database we created in this video:

software-matters.co.uk/free-access-stock-control-database.asp All you need to get started is a copy of Access and a beginner's knowledge of how it works. Get more help and advice on Excel, Access or VBA projects:

software-matters.co.uk/youtube_links.html If you want to find out whether a bespoke database would be right for you, get in contact: software-matters.co.uk/contact.asp Learn more about our work: software-matters.co.uk/projects-blog.html Music by Kevin MacLeod incompetech.com/music/royalty-free/ We have now uploaded a no music version of this video:

----- MORE INFORMATION: To follow this tutorial you will need a full copy of Microsoft Access. The video was made using Access 2010, however the process is very similar in Access 2013, Access 2016, Access 2019 and Access 365 (as well as Access 2007). We'll be going as far as setting up the database tables, which traditionally would be stored in a so-called 'back end' database file, while forms, queries and report, which are not covered in any details by this tutorial, would be stored in a separate 'front end' database file. The tables from the back end are then 'linked' to the front end, so that it behaved as if all the objects were in one file. In some places we have made the design deliberately simple in order to keep our relationships clean and the number of tables low. This helps those new to Access to get their heads around how to create the database, but for actual use, might cause problems. We recommend that you learn more about database design from other sources before beginning your project if you intend to use it for a real business. Key topics to consider are: database normalisation theory; Inner, Left, Right and Outer Joins; Basic SQL (structured query language) use; Software Development Methodologies; UX (user experience) enhancement techniques; and of course, the very specific needs of your business, project or client. All together, a broad knowledge of these topics will allow you to design your tables with enough foresight to make the setting up of the queries, forms and reports you'll need later as easy as possible. Plus it should make the system easy to use and less likely to be corrupted or crash. Keep in mind that even if your stock database needs don't fit very well with our example parts database, or if you need an entirely different kind of system like an accounts database or CRM database, the lessons in this tutorial can still apply.

If you're going to have a cyber attack, have it with us.

The Australian Cyber Security Centre (ACSC) received over 67,500 cyber attack notifications in the last year. The increase equates to one notification every 8 minutes. The current cyber threat landscape and insurance environment are challenging for businesses and brokers. Ransomware attacks pose one of the most significant threats to Australian businesses while the cost of business email compromise (BEC) attacks have increased by 50% in the last financial year. Listen to the experts guide you through: - What the current threat landscape looks like - Review of Incident Response and Claims Handling - A Year in Review - Latest cyber claims example - Emergence cyber portfolio claim stats insight

Database Design Course - Learn how to design and plan a database for beginners

This database design course will help you understand database concepts and give you a deeper grasp of database design. Database design is the organisation of data according to a database model. The designer determines what data must be stored and how the data elements interrelate. With this information, they can begin to fit the data to the database model. Learn more about this course on Caleb Curry's website: calebcurry.com/freecodecamp-database-design-full-course/ ★ Contents ★ (0:00:00) Introduction (0:03:12) What is a Database? The 9 Most Successful Business Models Of Today

In this video - which is longer than most of my others, I explain the most successful business models of today, including platform businesses, data driven businesses, and a shift from product to service. If you would like more information on this topic, please feel free to visit my website and sign up for content updates! I write articles every week on various different topics such as Big Data, Blockchain, Key Performance Indicators & Metrics. Visit the Strategy & Business Performance topic page here: bernardmarr.com/default.asp?contentID=1569 Thanks for watching!

EP24: The Dark Side of Identity: Mitigating the Risks (PT 2): A Data-Centric Approach

Digital identity systems are generally accepted as positive tools for social good. Nevertheless, they can pose several dangers and cause significant concerns. In this 3-Part LiveCast series, ID4Africa aims to give voice to the broadest spectrum of opinions on the risks and harms of ID systems and to start a positive dialogue on how to best guardrail these systems so that they are rendered responsible and resistant to exploitation and abuse from potential nefarious actors. In this episode we continue with Part 2 of the Trilogy to further engage in constructive conversations around the risks of ID systems and their mitigation. This set of discussions will focus on major themes of Data Risks and Identity in Fragile Contexts, with a special debate on Facts and Myths of ID systems. Outline: 00:00 Introduction 13:45 Trustworthy Digital Identity with Carsten Maple (Alan Turing Institute) 29:52 Argentina's National ID Registry Breach with Tunde Okunoye (Harvard University) 41:30 Derived Digital ID with Oscar Okwero (CIPIT, Kenya) 53:35 Data Aggregation with Jonathan Marskell (World Bank) & Dr. Edgar Whitley (LSE) 1:26:33 National Security Exemptions with Solomon Okedara (Digital Rights Lawyers Initiative) & Teki Falconer (Africa Digital Rights' Hub) 1:43:51 Identity in Fragile Contexts with Dr. Emrys Schoemaker (Caribou Digital) & Dr. José Arraiza (UNDP & OHCHR) 2:16:00 Bridging the Gap with Bridget Andere (Access Now) & Hadiza Ali-Dagabana (NIMC, Nigeria) 2:56:23 Conclusion About the Panel: id4africa.com/livecast-ep24-the-dark-side-of-identity-part-2/ About ID4Africa LiveCasts: id4africa.com/livecasts/
